01: INDOOR

01: INDOOR

The modular Indoor signage system breathes elegance and is entirely flexible in its installation. Its simplicity belies its functionality which guarantees efficient and precise information for the visitor. Its attractive design, while remaining discreet, ensures that it catches the eye and fits in perfectly in every institution or company.

Alu-Sign has a wide range of indoor panel profiles offering versatility for door and wall plates and directories. The profiles are based on a 31 mm module, ranging from 31 to 250 mm with sizes to suit every need and occasion.

Alu-Sign offers a wide range of text options including screen print, vinyl or engraving along with a choice of attractive designs and forms ranging from flat panels to square, angled or curved aluminium sidings. Available either as single or double-sided, they are ideal as desk top signs, or there is the choice of their being suspended or mounted as a wall fitting.

We carry a comprehensive stock of profiles which can be supplied either in a mill finish, anodised or power coated. There are two models of desk signs delivered as 31 and 62 mm profiles which offer easy mounting with 31 to 250 end caps. Alu-Sign's sliding system is also available in 2 designs from 31 to 93 mm, the rounded-off dymo and smooth versions.

As with all Alu-Sign products replacing the display or its contents is simplicity in itself.
